Final Remark

TOP's Strategy

Key Achievement Highlights

ESG & Recognitions

Key Performance Highlight

Maintain Vision “Empowering Human Life through Sustainable Energy and Chemicals”

Empowering Strength for Powering Growth

สร้างรากฐานที่มั่นคง สู่การเติบโตอย่างยั่งยืน

“2S1P”
Strategy

Phase I (2025-2030)
“ Empowering Strength ”

Readiness through commercial collaboration, R&D

CFP completion as planned

Safety & Reliability Margin Leadership Quick-Win High Value Products

Expand regional platform & product portfolio to specialty chemicals

Execute asset rationalization

Phase II (2031-2035)
“ Powering Growth ”

Diversify portfolio to high margin & less carbon business

Decarbonization through Energy Efficiency

Key Achievement Highlights 2025

Key Highlights

Performance

Outlook

CFP Update

Final Remark

TOP's Strategy

Key Achievement Highlights

ESG & Recognitions

Key Performance Highlight

1

Successfully Completed Planned MTA

To enhance reliability, production efficiency and equipment integrity management, driving **maximized refinery utilization in Q4'25** & high reliable run going forwards

2

Solid Progress on CFP Project

- **Successfully enforced security under EPC contract ~440 MUSD**
- EGM No.1/2025 held on 21 Feb 2025, approved, among other things, additional investment cost for CFP of approx. 1,776 MUSD
- **Completed awarding all key contractors in 2025**

3

Successful Asset Monetization

- EGM No.2/2025 held on 9 Dec 2025, approved **99.99%**
- **Received net cash proceeds of ~18,230 MB** from compensation of long-term leasehold right
- The proceeds were **used for deleveraging (bought back USD bond 550 MUSD in Q1'26) to enhance financial leverage**

4

Successfully Executed Deleveraging Actions ~1,483 MUSD

- Bought back USD bond ~ **633 MUSD** in Q3'25
- Completed long-term loan prepayment **~300 MUSD** in Q3'25
- Bought back USD bonds **~550 MUSD** (booked gain in Q1'26)

5

Liquidity Readiness for CFP

- Successfully **issued perpetual bonds ~ 600 MUSD with 6.10%** p.a. coupon, NC for 5.25 years with **competitive cost of fund 3.875%** (after swap to THB)

6

Parental Support

- TOP as a highly strategic subsidiary of PTT, supported by PTT's Group Asset Optimization
- **Extra extension of trade credit from 45,000 MB to 65,000 MB** with extension of trade credit to 120 days

↑ 1.5 \$/bbl
QoQ 0.4 \$/bbl

- **Lower crude oil price** due to market oversupply after OPEC+ unwind production cuts and weaker demand from economic slowdown, mainly from U.S. and China
- **Higher crude premium** due to higher ME crude demand from India and China amid concerns over U.S. tariffs and Russian crude sanction

- **Higher gasoline spread** supported by tight supply from lower Chinese's export and higher demand in Asia
- **Increasing middle distillate cracks** driven by geopolitical tensions and higher demand during winter season
- **Lower HSFO spread** due to higher supply from OPEC+ increasing production and lower heating oil demand in the Middle East after end of summer season

Stronger Aromatics and LAB contribution supported by run rate optimization amid pressured PX and BZ margins

- **Slightly lower PX margins** driven by softer PX demand from sluggish textile production in China
- **Softer BZ margins** due to limited BZ demand amid low downstream margins, along with high BZ inventories in China
- **Slightly Higher LAB contribution** supported by low utilization rate of new supply in China

Stronger Lube contribution supported by run rate optimization amid pressured Base Oil margins

- **Lower Base Oil margins** due to higher supply following the restart of G.1 plants from maintenance
- **Higher Bitumen spread** driven by lower HSFO price following higher crude supply after OPEC+ unwind production while bitumen demand in China and Indonesia remain sluggish

Contribution (\$/bbl)

TOP's Domestic Sales vs Industry

Refinery : Higher Contribution

Stronger Mkt GRM Driven by Higher Middle Distillate and Gasoline Cracks

Member of
**Dow Jones
Sustainability Indices**
Powered by the S&P Global CSA

Key Highlights

Performance

Outlook

CFP Update

Final Remark

Overall Refinery Aromatic & LAB Base Oil GIM Power Olefins Solvent & Ethanol All business F/S & others

Gross Refinery Margins (GRM) (\$/bbl)

Refinery Utilization (%)

Crude Intake (%)

Performance

- + Q4'25: Higher refinery run rate at 114% following the resumption of full-capacity operations.
- FY'25: Slightly decrease refinery run rate to 106% due to planned MTA of CDU-3 and related units in Q3'25.

Q4'25 Market GRM (QoQ)

- + Increasing middle distillate cracks driven by geopolitical tensions and higher demand during winter season.
- + Higher Gasoline spread supported by tight supply from lower Chinese's export and higher demand in Asia.
- Lower crude oil price due to market oversupply after OPEC+ unwind production cuts and weaker demand from economic slowdown, mainly from U.S. and China.
- Lower HSFO spread due to higher supply from OPEC+ increasing production and lower heating oil demand in the Middle East after end of summer season.
- Higher crude premium due to higher ME crude demand from India and China amid concerns over U.S. tariffs and Russian crude sanction.

Key Petroleum Product Spreads (\$/bbl)

Crude Price and Premium (\$/bbl)

2025 Market GRM (YoY)

- + Stronger Mkt GRM from higher petroleum product spread mainly driven by stronger middle distillate cracks due to reduced Russian supply and exports as a result of refinery damages and U.S. sanctions.

Aromatics & LAB : Higher Contribution

Stronger Contribution Supported by Run Rate Optimization amid Pressured PX and BZ Margins

Member of Dow Jones Sustainability Indices
Powered by the S&P Global CSA

Key Highlights

Performance

Outlook

CFP Update

Final Remark

Overall Refinery Aromatic & LAB Base Oil GIM Power Olefins Solvent & Ethanol All business F/S & others

Gross Integrated Margins (GIM) & Product-To-Feed Margin (P2F)

TPX Utilization (%)

LAB Utilization (%)

Performance

- + Q4'25: Increase in TPX utilization rate to 76% and LAB utilization rate to 126%, following the resumption of MTA in Q3'25.
- FY'25: Decrease TPX utilization rate to 67% and LAB utilization rate to 110% due to planned MTA of CDU-3 and related units in Q3'25.

Q4'25 Market GIM (QoQ)

- Softer PX margin driven by softer PX demand from sluggish textile production in China.
- Decreasing BZ margin due to limited BZ demand amid low downstream margins, along with high BZ inventories in China.

Aromatic's Sales (excluding by product) (Kton)

Aromatic Spreads (\$/ton)

- + Stable LAB contribution by new supply still operating below full capacity, despite increasing supply in China.

2025 Market GIM (YoY)

- Lower BZ spreads due to constrained benzene demand, as styrene monomer margins remained weak and bz inventories in China stayed elevated.
- Lower PX spreads due to weaker demand for textile fiber production and sluggish retail textile sales in China.
- + Higher LAB contribution from increase in LAB gross margin

Base Oil : Higher Contribution

Higher Production Rates and Sales Volumes Following the Completion of MTA

Gross Integrated Margins (GIM) & Product-To-Feed Margin (P2F)

TLB Utilization (%)

Performance

- + Q4'25: Higher utilization rate to 90%, following the resumption of MTA in Q3'25.
- FY'25: Lower utilization rate to 76%.

Q4/25 Market GIM (QoQ)

- + Higher Bitumen spread supported by lower fuel oil prices.
- Decreasing Base Oil margin driven by increased supply following the resumption of normal operations at Group I base oil refineries after scheduled maintenance.

TLB's Sales (excluding by product) (Kton)

Base Oil & Bitumen (\$/ton)

2025 Market GIM (YoY)

- + Higher Base Oil margin supported by a decline in fuel oil prices.
- + Higher Bitumen spread supported by lower fuel oil prices.

Soften Crude Oil Price as Supply Growth Outpacing Demand Growth

Member of
Dow Jones Sustainability Indices
Powered by the S&P Global CSA

Key Highlights

Performance

Outlook

CFP Update

Final Remark

▶ Crude

Refinery

Petrochemical

Lube & Bitumen

Conclusion

1 OPEC+ to Consider Another Unwind Production Cut after Mar'26

* Production declined in Dec '25 mainly due to US sanctions on Iran and US blockade on Venezuela

2 Decent Non-OPEC+ Supply Growth in 2026, Mainly from Brazil & US

• Non-OPEC oil production growth mainly driven by Brazil due to new project start-ups, especially new offshore projects

3 Moderate Global GDP & Oil Demand 2026 vs 2025

Moderate GDP growth with fiscal and monetary support, and private sector adaptability offsetting negative impact from trade tariff

Higher GDP growth supported by fiscal stimulus, easing monetary policy, and strong investment in technology business

Moderate GDP growth pressured by structural headwinds, including weak property sector and soft domestic demand

Global oil demand growth 2026: +1.1 MBD
2025: +1.0 MBD

4 Global Oil Supply Growth Outpacing Demand through 2026 (Surplus of 2.8 MBD)

(1) Source: FGE (Feb'26) (3) Source: IMF (Jan'26)
(2) Source: EIA (Feb'26)

5 Escalating Iran Conflicts with Multiple Market Implication

Iran crude production and exports (1)

Iran situation map and US bases (2)

Market implication

5.1 (As-is) Prolonged tension causing risk premium in ME crude supply

- Buyers shift from Iranian crude to other ME crude to avoid US sanction

5.2 A disruption of crude supply via the Strait of Hormuz would affect around 20 MBD (~20% of global oil), but market believe a closure of the Strait of Hormuz is unlikely and would be short-lived

5.3 Constructive outcome & relieved sanction

- Iranian export flows would be rerouted, allowing Iranian oil to reach others.

6 Reviving Venezuela Oil Export amid the Challenge to Unlock Production

Venezuela crude production and exports (1)

Short-term impact

- Minimal impact on crude prices** due to
- Slightly higher crude export from Venezuela but limited by deteriorated infrastructure

Long-term impact

- Pressure to heavy crude price** if more Venezuelan crude export in the future

7 Rerouting of Oil Flow after US-India Deal

Trump slashes tariffs on Indian goods to 18% from 50% in exchange for India halting Russian oil purchases and will instead buy more oil from US and potentially Venezuela

India crude imports by country (2)

Market implication

India has been redrawing crude import strategies to shift away from Russia

Lower crude imported from Russia
1.2 MBD in Jan'26 vs 1.7 MBD in 2025

Potentially boost imports from US & Venezuela depending on economics

India has secured 2 MB of Venezuelan crude for delivery in late Apr'26

Performance

Outlook

CFP Update

Final Remark

▶ Crude

Refinery

Petrochemical

Lube & Bitumen

Conclusion

8 Uncertainty of Russia-Ukraine Peace Talks amid Ongoing Sanctions

- Over 200 MB of Russian crude is stranded in tankers due to US sanctions risk if releasing if constructive peace talk

- India shifted from Russian crude to ME crude to avoid US sanctions driving up ME crude premium

9 Stable Crude Premium due to Stronger ME Demand and Limited Exports Offsetting by Global Surplus Supply

+ Murban crude premium is being supported as India refiners have increased purchases of ME crude to replace Russian crude

+ Limited Murban export as ADNOC reallocating supply to their Ruwais Refinery during Aug'25-May'26

- Limited Upside by continued surplus supply in global crude market

Crude Oil Outlook In Summary

Crude Prices

Lower crude oil price pressured by surplus supply

Crude Premium

Steady crude premium by strong ME demand from India and lower export availability from ADNOC, offsetting by ample global crude supply

Geopolitical Tensions

High volatility particularly from tensions involving Iran and Russia-Ukraine

Conclusion

1 Net Higher Gasoline Supply from Upcoming Refinery Capacity Additions amid Slow Gasoline Demand Growths

Net Gasoline Supply (1)

Gasoline supply in 2026 is expected to rise mainly from **Dangote and Olmecca refineries**

Dangote is expected to stabilize after resolving RFCC issues during Dec'25 – Feb'26 and gradually ramp toward full capacity by late 2026

Olmecca is currently running its CDU at around 200 KBD and is expected to start up its FCC unit in Jul'26

Highlight refinery capacity

- Dangote refinery capacity 650 KBD
Gasoline yield : 45%
- Olmecca refinery capacity 340 KBD
Gasoline yield : 41%

Thailand Petroleum Demand in 2026: Slow Growth Driven by Weak Economic Expansion

- Key Highlights
- Performance
- Outlook**
- CFP Update
- Final Remark

- Crude
- Refinery
- Petrochemical
- Lube & Bitumen
- Conclusion

1 Slow growth of gasoline demand in 2026, pressured by sluggish passenger car registrations, while partially supported by lower retail prices

Gasoline Demand

Passenger car registrations (RY1 & RY2)

Forecast year 2026

- Slow growth of total passenger car registrations at +3% YoY pressured by high household debt
- Higher BEV registration growth at +17% YoY, accounting for 25% of total registrations, exceeding prior forecast of ~15%, driven by attractive price Chinese EV Car. (Source: DLT, Krungsri, TOP assumption)

2 Stagnant gasoil demand, driven by weak commercial car registrations and soft domestic economic conditions

Gasoil Demand

Commercial car registration (RY3, Bus & Truck)

Forecast year 2026

- Slow growth of total commercial car registrations at +1% YoY pressured by high household debt.
- Higher BEV registration growth at +9% YoY, though still accounting for only 1% of total registrations, driven by new investments in e-bus service projects and continued large-scale EV battery development. (Source: DLT, BOI, TOP assumption)

📌 Conclusion

3 Consistent growth in 2026, fueled by rising tourist numbers, supported by government policies promoting tourism and economic expansion

Jet Demand

Tourist numbers

Flight numbers

Forecast year 2026

- Higher growth of foreign tourists by 11% YoY, supported by the growth of alternative markets e.g India and other long-haul travelers.
- Higher growth of flight numbers by 3% YoY (International flight +2% YoY), supported by network expansion and higher flight frequencies

(Source: TAT, AEROTHAI)

4 Slight contraction resulting from weaker export, impacted by Trump's trade policies and on-going Thailand-Cambodia border tensions

Fuel Oil Demand

Export Value

Forecast year 2026

- 3.1% to +1.1% YoY in export value, pressured by high base effect from previous year, ongoing trade wars, TH-Cambodia tension, and volatile Thai baht.
- Export growth in 2025 was strong, driven by a low base in 1H'24, front-loaded shipments as well as robust global demand for electronic products.

(Source: MOC, BOT)

Improved PX Market from Postponed Supply Additions and higher Indian import from BIS removal While BZ Remains Challenged by Ongoing Capacity Additions

Market Highlight: BIS Removal Supports PX price Through Higher Chinese PTA Export Opportunity

Removal of BIS certification for "simplified procedures, eliminated duplicate testing and expedited approvals"

Applicable to Chemical Aromatics Chains: Paraxylene, PTA, Toluene, Polyester (Spun, IDY, PSF, FFDY, POY), ABS, SM

Who're win?

Asian Upstream Producers
- Improving PTA export opportunities may drive higher Chinese PX import

Indian End-Used Producers
- More reliable supply, enhanced confidence for downstream expansion

Chinese PTA Export

BIS Removal (Nov-25)

+477% (Nov-25 vs Sep-25)

+90% (Nov-25 vs Oct-25)

After Indian government revoked BIS certificate since Nov'25, Chinese PTA export is significantly increasing and promoting the stronger PX trend from more PTA production

“ Deliver Our Promise ”

Key Takeaways

Ensure the Delivery of CFP Project

Target to accelerate full COD, with cost savings

Ensure Plant Reliability amid Expected Healthy GRM

Driven by global demand growth outpacing net capacity additions and maximized TOP's refinery U-rate

Disciplined Liability Management

To strengthen TOP's Balance Sheet through deleveraging actions to improve leverage ratios

Strengthening Investment Grade Credit Rating

APPENDIX

- Dividend
- CAPEX
- Financial Performance
- Optimised & Flexible Operations...Superior Performance
- World GRM / Inventories
- Thailand petroleum demand by products

Optimized & Flexible Operations

Superior Performance

Thai Oil is able to diversify its type of crude intake and product outputs to maximize demand and margin

*Crude yield as per assay in Spiral as of Feb 2016

** Source: Energy Policy and Planning Office, Ministry of Energy Thailand

- Flexibility in crude intake allows diversification of crude types to source cheaper crude
- Flexibility in product outputs by maximizing middle distillates (jet and diesel) by adjusting production mode to capture domestic demand and price premium
- Maximize Platformate production to capture higher margin on aromatics
- Minimize fuel oil output to avoid lower margin products

China's Refined Product Exports

China Gasoline Export

China Gasoil Export

China Jet Export

Domestic LPG Demand

Thailand LPG Demand

Remark : LPG demand includes Petrochemical consumption

LPG Demand by Sector

KT/MTH ■ Cooking ■ Industrial ■ Automobile ■ Petrochemical

LPG Demand Highlight

- In 2025, LPG demand decreased by 1.8% YoY. The demand was pressured by petrochemical and automobile sector, which decreased by 5.7% and 1.0% YoY, respectively. However, the demand was supported by cooking, and industrial sector, which increased by 2.0% and 0.4% YoY, respectively.

Outlook for 2026

- LPG demand is expected to decrease by around 0.3% YoY, which will be pressured by lower demand, particularly in the transportation and petrochemical sectors. However, the demand will be supported by higher demand from the cooking sector, as the Ministry of Energy (MOE) is prone to maintaining the retail price of LPG for cooking at 423 baht per 15 kg cylinder in 2026 (currently, the retail price will be maintained until 31 Mar 2026) in order to help reduce the cost of living.

Source: EPPO, DOEB (As of Jan 2026)

Domestic Gasoline/Gasohol Demand

Thailand Gasoline/Gasohol Demand

Gasoline/Gasohol Demand by Grade

GASOLINE/GASOHOL Demand Highlight

- In 2025, Gasoline demand increased by 1.1% YoY. The demand was supported by higher demand for GSH95 E10, which increased by 8.8% YoY, due to a narrower price gap compared to GSH91 E10.
- However, the demand was pressured by lower demand for GSH91 E10, E20, and E85, which decreased by 11.6%, 6.6%, and 12.5% YoY, respectively, due to slow growth of new passenger car registrations pressured by high household debt and a slight impact from the increase in BEV registrations.

Outlook for 2026

- Gasoline consumption is expected to grow slowly at 1.1% YoY, pressured by slow economic growth and slow growth of passenger car registrations, but partially supported by lower retail prices. The Bank of Thailand (BOT) forecasts Thailand's GDP to expand by ~1.5% in 2026 (vs. 2.2% in 2025), while the Ministry of Finance (MOF) projects the Private Consumption Index (PCI) to increase by 2.7-3.7% in 2026 from the investment incentives.

Source: DOEB, MOF (As of Jan 2026)

Domestic Jet Demand

Thailand JET Demand

JET-A1 Demand and Number of Flights

JET Demand Highlight

- In 2025, Jet consumption increased by 7.3% YoY. The demand was supported by the expansion of total flight movements, which increased by 4.3% compared to last year, including international flights, which increased by 1.6% YoY, and domestic flights, which increased by 8.0% YoY. In addition, total passenger numbers in 2025, including domestic and international, increased by 2.3% YoY. However, according to the Ministry of Tourism & Sports, tourist numbers in 2025 reached 33.0 million, decreasing by around 7.2% compared to last year, mainly due to lower Chinese tourist arrivals, which declined by 34% YoY from safety concerns and most tourists visited Japan instead.

Outlook for 2026

- Jet demand is expected to grow by 4.0% YoY, mainly supported by rising tourist arrivals (+11% YoY to ~36.7 million) alternative markets e.g India and other long-haul travelers, but still pressured by border tensions between TH-Cambodia, natural disasters and slow recovery of major markets particularly Chinese tourists. Additionally, Airports of Thailand (AOT) forecasts total flight numbers in 2026 to increase by over 800,000 (noting that flight numbers correlate more strongly with jet demand than tourist numbers).

Source: DOEB, TAT (As of Jan 2026)

Domestic Gasoil and NGV Demand

Thailand Gasoil Demand

*Exclude Marine Gasoil

NGV Demand

Gasoil Demand Highlight

- In 2025, gasoil demand decrease by 2.8% YoY, reflecting weak economic recovery and subdued industrial activity, as evidenced by a contraction of around 0.8% in Thailand's Manufacturing Production Index (MPI), alongside geopolitical uncertainties and a slowdown in commercial vehicle sales. However, demand was partially supported by the shift to B5 biodiesel, effective from 21 November 2024.

Outlook for 2026

- Gasoil demand is expected to remain stable in 2026, in line with a gradual recovery of the Thai economy and a projected improvement in the MPI, supported by growth in agriculture and e-commerce. However, upside remains constrained by high household debt, while the impact from rising BEV adoption remains limited, as BEVs account for only around 1% of total vehicle registrations.

NGV Demand Highlight

- In 2025, average NGV consumption was 2.3 KT/Day, reflecting a 16.5% decrease YoY. This declining trend aligns with the continued contraction in the NGV vehicle fleet, which fell by 11.7% YoY, and the gradual closure of NGV refueling stations with further closures expected. This trend occurs amid a broader structural shift toward alternative fuels and electric vehicles. Despite the decline, PTT continues to support NGV usage in the public transport sector by maintaining a fixed NGV price of 15.59 baht/kg for taxis and public transport vehicles holding benefit cards until 15 Jan 2026

Source : EPPO, DOEB (As of Jan 2026)

Domestic Fuel Oil Demand

Thailand Fuel Oil Demand

Thailand Fuel Oil Demand by Sector

Fuel Oil Demand Highlight

- In 2025, Fuel Oil consumption increased by 6.0% YoY, primarily driven by stronger demand from the transportation sector, which accounted for 66% of total fuel oil consumption. The sector recorded a sharp 10.6% YoY increase, supported by higher export activity as businesses built up inventories amid trade policy uncertainties. Thailand's exports expanded by 12.9% YoY in 2025, reaching a record high of USD 339.6 billion (approx. THB 11.1 trillion), driven by strong growth in electronics, industrial products, and agricultural-related industries. Meanwhile, fuel oil demand in the industrial sector slightly declined by 1% YoY, reflecting continued weakness in domestic economic activity.

Outlook for 2026

- Fuel Oil demand is projected to decrease 0.6% YoY, mainly due to slower export activity under continued U.S. tariff measures and ongoing Thailand-Cambodia border tensions. Thai exporters also face pressure from a strong baht, which reduces price competitiveness in key markets. According to the Ministry of Commerce, exports are forecasted to grow between -3.1% and +1.1%, though electronics exports and a potentially weaker baht may partly cushion the downturn, supporting manufacturing and logistics activities.
